

Kumiko (Grid) Options

Our standard grid pattern (A) is based on a rectangle of 250mm wide x 150mm high. In practice, the actual size of the grid and the number of rows (top to bottom) will depend upon the exact dimensions of the screen to be built.

Facing: All screens are single faced. This means that the timber grid work (kumiko) appears on the front of the screen only.

Finish: Our screens are constructed from Tasmania Oak (a light grained hardwood), which is then finished with your choice of stain or varnish.

Papering Options: Laminated PVC papers imported from Japan. Durable and washable in a matte finish. Two patterns available - plain and bamboo.

Tracking Options: Your choice of traditional Japanese timber tracks or contemporary top hung metal tracks.
